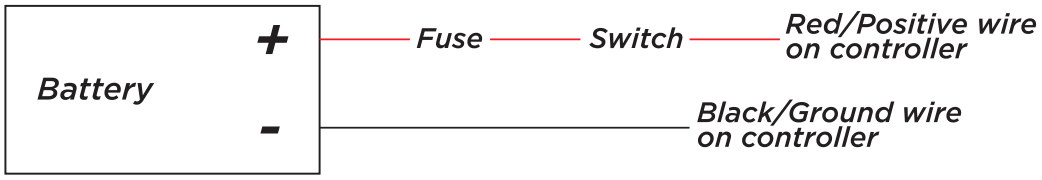
WHIP INSTALLATION INSTRUCTIONS (A24UN634MC/A24UN633MC)

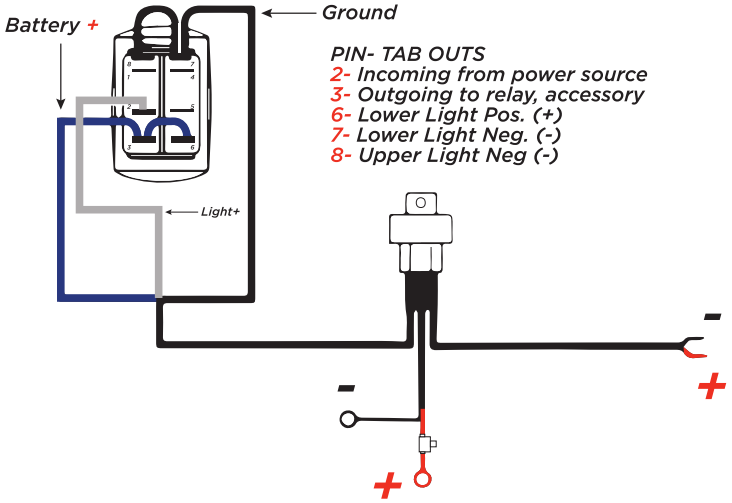
Thank you for your purchase of the finest whips on the market. All whips are built by hand in the USA and covered by our limited lifetime warranty. All installation is done at users own risk.
Pro Armor / 5150 Whips Inc. is not responsible for any damage caused during or by installation.
** Your new Pro Armor Whips by 5150 must be wired to a switch or a source that can cut power to the controller. Failure to do so will cause a constant drain on your vehicle's battery and damage to the controller**

Minimum Wire Gauge: 18 awg

Your Wiring:

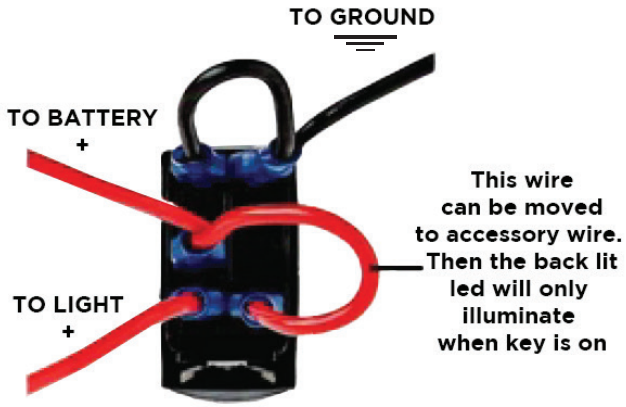


5150 Whips Power Harness: (If purchased)

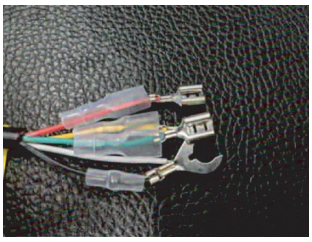


How to wire 5 pin switch:

(If purchased separately from Power Harness)



Controller Explained:



Red = Power

Black = Ground

Yellow = Right Turn

Green = Left Turn

White = Brake

By hooking up the White wire to your positive brake wire your whips will turn red when the brake is applied.

If your vehicle is equipped with a turn signal kit, the Yellow and Green wires can be tied into the positive left and right turn signal wires. This will allow the whips to flash amber depending on left or right signal being used.

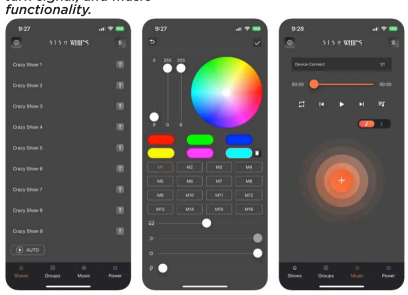
**Please note the labels on the whip connector as they correspond with left/right sides.*

Download 5150 Whips App.

(Visit the App Store or Google Play)

This application is for use exclusively with 5150 Whips LED controllers. The user can control multiple zones independently, while offering brake and turn signal functionality. It includes 16 different crazy light shows, that can be modified with custom color options. In addition, you can pair music from your phone to make the lights dance with the rhythm of what you are listening to.

**Not all 5150 Whips controllers offer multiple zones, brake, turn signal, and music functionality.*



Common Questions:

- *Is the controller water proof?*

  Yes

- *Why are extensions only 10 ft?*

  It is easier to run the controller to the rear and run just a power/ground wire than trying to fix the extensions to the rear.

- *Can your rock lights, Fangs, Halos, Eyebrows all run off of one controller?*

  Yes

Tech Support: (800) 674-9920 ext 2. Monday through Friday 8 am to 5 pm PST.
