

HAVE A DIRTY DAY!

# DIRT WARRIOR ACCESSORIES

## REAR WINDSHIELD HELPFUL INSTALLATION TIPS

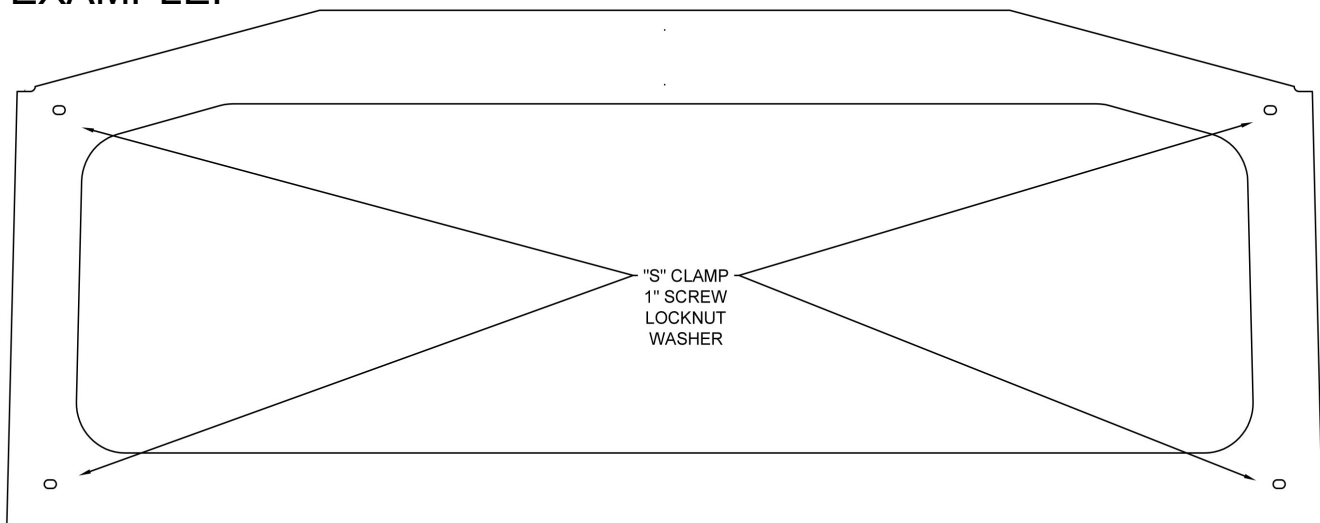

This is an example of one of our windshields and clamp placement.

Each windshield model has slightly different characteristics.

Reference this as a general guide. If you have additional installation questions, please contact us.

- Remove the clamps from the windshield and put each clamp on the roll cage in the same general vicinity as the hole where you removed them from the windshield after unpacking. Windshields will have either 2, 4, or 6 clamps depending on your model. (See example diagram below.)
- Hold window up and lay in place on roll cage. This usually works best with 2 people and a little muscle!
- With screws, washers, and nuts (supplied) finger tighten all screws to cage clamps and roll cage. Install from inside the cab or from the back depending on the model.
- Position side to side to center window on the cage.
- Once you have the window positioned, begin tightening all screws.
- Next up, enjoy that new rear windshield on the trails!
