

MOOSE BOTTOM MOUNT PLOW INSTRUCTIONS
CAN-AM DEFENDER
PART# 4501-0872

ITEM	PART#	QTY.	DESCRIPTION
1	2825-70	1	Plow Mount Weldment
2	HDW2073	2	5/16 x 1-1/2 x 3-1/2 Sq. U-Bolt
3	HDW9035	2	5/16 x 2-1/2 Hex Bolt
4	HDW7058	6	5/16 Nylock Nut
5	HDW9002	8	5/16 Flat Washer

Attach Bottom Mount to UTV as shown in pictures.

The U-Bolts will go over frame tubes right behind the trailing arm bracket and through a gap between front skid pan and rear skid pan.

The back tabs will line up with holes in the floor board support frame tube. (NOTE: On models with plastic skid plate There will be a line on the skid plate and these places will need to be cut out to get mount to fit up properly.)

Use the 5/16 x 2-1/2 hex bolts on the rear tabs to bolt up to floor board frame with a washer on each side of the bolt.

Use the 5/16 Nylock Nuts to secure all bolts and align and tighten.

Push tube will pin up with the wire loop pins supplied
With the push tube kit.

HDW9062	2	5/16 x 2 x 3-1/2 SQ. U-Bolt
HDW2073	2	5/16 x 1-1/2 x 3-1/2 SQ U-Bolt
HDW7058	8	5/16 Nylock Nut
HDW9002	8	5/16 Flat Washer
Inst2806	1	Instruction Sheet

Remove the two center floor board panels.
first center front section and then the center right floor
panel.

Remove the right side bolt (Picture with Ratchet) and then
the left side bolt as pictured. Removing these bolts is so you
will be able to push the floor boards up when installing the
u-bolts. After installation of the plow mount reinstall
the floor board panels.

LEFT SIDE PICTURE

RIGHT SIDE PICTURE

Product has a one year manufacture defect warranty. Never accede 5 mph when plowing snow or you may cause
damage not covered under warranty. Periodicly check bolts for tightness.

CAN-AM DEFENDER PLOW MOUNT
PART# 4501-0648

Front U-bolts (5/16 x 1-1/2 x 3-1/2) will go right in front of the center skid plate as pictured.

Back U-bolts will go around the front frame floor board support as pictured. This is the location that you will have to Pry up on the floor board to get the U-bolt around the frame tube. You may align the plate with the front U-bolts Before placing the second ones in place so you can get them in close proximity on where they need to be.

Align plow mount up with U-bolts and attach with the washers and nylock nuts. Tighten securely. Some models you may need to align the mount on front u-bolts and mark where the back ones need to go and then drill Through the plastic. You may also need to remove some of the revits on the outside skid plates to get the u-bolts in place, you can also cut a slot from the square opening to the u-bolt location to help in the process.

V-PLOW ASSEMBLY

V-Plow comes in three boxes right blade, left blade and push tube. You will need to buy a bottom mount plate for your machine to mount this to if you do not have one installed already.

The blades come with wear bar installed on them and the rubber flap will be zip tied to the blade along with the rubber flap bolt bag (BB2567). The push tube box will have all other hardware and components in it.

INSTALLATION

Open push tube box and remove other parts. The center support will be in a box by it's self, all other hardware and parts are in the parts box.

Remove blades from box do not install flaps at this time. Place right and left blades on ground upside down and slide together. Now set the Center Support down in place. You will use item (4) 2718-400 Center skid to slide up and through all the tubes connecting the blades to center support. (start with two 3/4" washers on center skid post and then slid up and through) You may have to tap through with a rubber mallet. On top use the remainder of the 3/4" washer and 1 – 3/16 hair pin clip. Flip blade on edge so wear bars are on ground.

You can now install the rubber flaps with the hardware that was zip tie with flap. The carriage bolts will go up through the blade and then through the flap with washer and nylock nut on top. NOTE: the center of the flap will overlap each other this is to keep snow dust down even when angled. You may have extra carriage bolts so just disregard those.

You can slide the push tube up in place and use item (15) Trip Pin (2713-204) to connect push tube to center support down at the bottom. Place a 3/4" washer on each side one pin in through and use 2 – 3/16 lynch pins to secure with one on each side.

Hook the blade springs item (11) to the upper part of the center support and then place the eye bolt on the other end and then through the holes on the bracket on the push tube and secure with the 3/8 nylock nuts. NOTE: there are three springs to hook up, the tension can be adjusted by tightening the with the nuts.

Place the manual adjusting tubes in place first with the larger of the tube going to the center support and use the 5/8 x 2-1/2 hex bolt and nylock nut to secure. There are some 5/8 washers you can use to center the tube in the bracket or to keep from rattling to much. Next slide the smaller adjust tube into the larger one and secure the end with the large hole to the blade use the other 5/8 x 2-1/2 hex bolt and nylock nuts. You may also use washers here to center tube in bracket. You will use to of the 3/8 wire loop pins in the adjustment holes.

The 1/2 x 2 hex bolt and nut are trip stop bolt and toward the bottom of the center support there is a 1/2 Nut welded in and this bolt will go up from the bottom into this nut but place regular nut on bolt first and then thread in to center support then adjust to get you correct blade pitch when blade is all the way in back position and tighten jam nut to secure.

The back of the push tubes will pin up to your bottom mount with the remaining two 3/8 wire loop pins.

OPERATING INSTRUCTIONS

READ BEFORE OPERATING

Customer must receive a copy of these instruction at time of purchase

DANGER

Remove bottom mount and or front mount before doing any trail riding

To avoid serious injury and or death:

- 2 – Always use extreme caution while operating the plow on slopes, grades or slippery surfaces.
- 3 – Stay clear of blade and other moving parts during operating the plow.
- 4 – When plow never ram the pile of snow or frozen objects.
- 5 – Always back up before raising the plow blade.
- 6 – Beware of your area and avoid hitting frozen objects at all costs.

WARNING

To avoid personal or other injury:

- 1 – Read your machines operators manual.
- 2 – Always wear safety apparel when operating machine such as, Boots, Gloves, Helmet, Eye Protection and never wear loose clothing
- 3 – Never allow riders or passengers on machine while operating.
- 4 – Always make sure machine is off and brake is locked before making any adjustments to plow system
- 5 – Always keep blade in down position when not in use or when working on.

OPERATION

FOR SAFE OPERATION:

- 1 - The blade and plow mount system were designed with safety in mind to protect you and your machine, certain parts a designed to fail when the system is over stressed.
- 2 – When adjusting the blade angle make sure blade is off the ground a little and lock blade up and Turn off machine. Always make sure the blade position pin is locked in place and pin is all way Through the swivel.
- 3 – Always double check the nuts and bolts to make sure everything is secure and tight.
- 4 – Always know your surroundings and what you are plowing.
- 5 – Never exceed more than 5 mph or (8 kph) when plowing.
- 6 - Never have any passengers aboard machine while plowing.
- 7 - Always wear the proper gear and safety clothing when operating the plow system.
- 8 - Never hit or ram and large or frozen snow banks.
- 9 - When plow is not in use lower it to the ground and turn off machine and lock the brake.
- 10 – The plow system is only intended for snow and not to be used to move any other objects especially any frozen objects.
- 11 – This plow is not to be used for commercial use at all
- 12 – Make sure you are familiar with operating the machine and plow before doing so and always Read the operator's manual.
