

Instruction Disclaimer

Dennis Kirk provides instructions to help our customers better understand how to install the products we sell. The instructions are exact copies of what the manufacturer includes with the product being sold.

That means the quality and accuracy of the instructions is solely dependent on what the manufacturer produces. We do our best to make the text legible and the pictures viewable. However, the end result depends largely on the quality of instructions the manufacturer provides.

Therefore, you will find that some instructions are not of the highest quality. Sometimes text is hard to read and pictures are not easy to see. At times you will find the overall look of the instructions to be less than professional. However, we feel it is better to provide what we have rather than provide nothing at all.

To the best of our knowledge the instructions and application information contained in the instructions is accurate. However, Dennis Kirk assumes no liability related to any errors that may be contained in the copy of the manufacturer's instructions we provide. Buyers are solely responsible to insure that product use is consistent with their application.

If you have any questions please contact us at customerservice@denniskirk.com or 800-969-7501 so we can further assist you regarding additional product information or any other business related questions.

Thank you for doing business with Dennis Kirk.

ALL EPI BELT #'S EXCEPT WE263040 WASH BELT BEFORE INSTALLATION

- Wash in warm soapy water with any type of dish soap.
- Dry belt **completely** before installing.
- This will remove any product from the belt that was obtained from shipping.

IF YOU HAVE PART # WE263040 WASH BELT BEFORE INSTALLATION

- Wash in warm soapy water with any type of dish soap.
- Dry belt **completely** before installing.
- This will remove any product from the belt that was obtained from shipping.

Due to small variances in the clutches on some machines, some machines require final adjustments for smooth shifter operation.

EPI includes a white plastic spacer that may need to be installed between the drive clutch retaining bolt large washer and the face of the drive clutch – see the photo below for placement. Some machines require this spacer and others do not. If you experience difficult shifting when you move the gear selector, try installing this spacer. Even further adjustment may be needed on a few machines – if this is the case, try removing one of the two metal shims behind the driven clutch.
